

Document type	Technical Data Sheet
Name	EBANO POWDER
Description	EBANO POWDER is a remarkable addition to floor and wall coatings, enhancing their appearance with tiny black dots and flakes. Natural aggregate petrographically homogeneous made up by fragments, blackish micritic bituminous limestone.
Composition	Calcium Carbonate : > 85,0 % - Silica : < 10,0 % - Iron Oxide : < 0,9 % - Aluminium Oxide : < 1,5 %
Grain size	30 to 700 µm
Appearance	Black stone fragments, from dust to granules
Packaging	480 g polyethylene packaging
Application	Pour all the contents of the 480g jar into a 24 kg bucket of wet product / 16 kg bucket of dry product, and mix until complete dispersion. This is the amount that at our discretion is the right one, but you can increase at will. Max operating temperature: 870°C. Generally, it must be added only to the 2 nd and eventual 3 rd coat of the decorative plaster application. Do not add to the material used for the 1 st coat.
Where to use it	It can be added to all STUCCO ITALIANO lime or cement-based decorative plasters with max grain size equal or superior to 700 µm
Consumption	Recommended: 480 grams per every 20-24 kg of wet decorative plaster / 16 kg of dry plaster
Shelf life	24 months when stored according to the recommended guidelines
Storage	In original sealed packaging between 5° and 35°C in a dry, dark environment
Safety Norms	Do not swallow. It is important to adhere to the prevailing safety and hygiene standards while using it. Always keep the product out of reach of children. In the event of ingestion seek medical assistance without delay and present the container or label.
Disposal	Product must be disposed of according to norms and regulations in force. Follow directions on the packaging.
